

William Min - Technical Game Designer

California, USA | will316.work@gmail.com | <https://www.linkedin.com/in/will316work/> | <https://will316work-cloud.github.io/william-min.github.io/>

EDUCATION

University of Southern California | M.S. in Computer Science – Game Development (GPA: 3.75) | May 2027

University of California, Irvine | B.S. in Game Design & Interactive Media (GPA: 3.75) | June 2025

EXPERIENCE

Boundary Remote Subsurface Solutions | **Front-End Developer**, UI Designer, Gameplay Engineer | Jan 2025 – May 2026

- Engineered front-end web UI for an environmental mining simulator under a 2GB hardware memory limit, maintaining high stability.
- Co-designed and implemented UI systems to display multi-functional real-time data visualizations while minimizing memory footprint.
- Architected decoupled, modular UI scripts using OOP principles, creating a scalable codebase that accelerated feature integration.

RELEVANT PROJECTS

Ghosts in the Toy Box (DEMO) | **Lead Game Designer, Lead Game Engineer**, 2D Artist | Jan 2026 – May 2026

- Designed and prototyped core mechanics for a top-down horror roguelike, implementing limited line-of-sight vision and enemy-tracking tablet systems to balance player tension.
- Built C# architectures for player abilities, enemy AI, and procedural room generation, enabling rapid iteration and content expansion.
- Led cross-functional meetings with engineers and audio designers to manage backlogs and deliverables, keeping project milestones ahead of schedule.

Buried in Love | **UI Engineer, Systems Engineer** | Apr 2025 – Jun 2025

- Engineered animation and character sprite transition systems to handle real-time entrance, exit, and expression changes, heightening narrative impact.
- Designed modular data tables to ingest dynamic scripts with variable character counts and dialogue lines, streamlining workflow and iteration for narrative designers.

Weather The Storm | **Game Designer, Game Engineer**, 2D Artist | Sept 2024

- Designed and shipped a 2D boss-survival game for Brackey's Game Jam, placing in the top 20% overall out of 1,428 submissions.
- Programmed a UI-less item-combination crafting mechanic, allowing players to build environment traps dynamically during active gameplay.

Demolition Brobot | **Game Designer, Game Engineer**, 3D Artist | Apr 2023

- Ideated, programmed, and iterated a 3D physics-based platformer in 4 days centered around explosive movement mechanics.
- Unified explosion physics across platforming jumps, environmental destruction, and puzzle interactions to increase player engagement.
- Fine-tuned ground/air controls and integrated custom 3D animations and particle feedback to maximize explosion responsiveness.

TECHNICAL SKILLS

Design:	Gameplay Design, Level Design, Enemy Design, Rapid Prototyping, Multi-discipline Collaboration
Software:	Unity, Unreal Engine , Adobe Photoshop, Adobe Illustrator
Programming Languages:	C#, Java, C++, Python
Tools:	Visual Studios, Git, Perforce, Claude Code , Gemini
